Glaze-Guard and the Twinfix range are available from:

The simple, effective way to fit polycarbonate sheet vertical glazing

With Glaze-Guard, the new glazing system for polycarbonate sheet, it really could not be simpler to fit polycarbonate safety and security glazing in vertical applications.

Polycarbonate sheet is today's ideal glazing material. It is clear, light, easy to handle and extremely impact resistant (being over 200 times stronger than the equivalent thickness of annealed glass). Unlike glass and other plastics, it will not crack, shatter, splinter or spall - even under the most violent impact or concerted assault. Now with Glaze-Guard you can protect any glazed installation with polycarbonate sheet simply and quickly, to prevent accidents, thwart vandals and deter criminals.

Designed specifically to accommodate polycarbonate glazing, Glaze-Guard is a simple, two-part, attractive profile which accepts thicknesses up to 8 mm. It is quickly assembled, easily fitted and leaves no unsightly or vulnerable fixings visible on the finished installation.

The Glaze-Guard system may be used as primary or secondary glazing.

As a secondary system, it is equally suited to overglazing inside or out. The aluminium frame needs little or no maintenance and is available anodised or powder-coated in white or brown.

It has a deep rebate to ensure that the polycarbonate sheet is adequately retained under load to accommodate flexing of the sheet under impact, yet it fully allows for expansion of the sheet and eliminates problems of thermal distortion.

All materials used in the Glaze-Guard installation system are chemically compatible with polycarbonate sheet.
