# ADT Anti-Dust Breather Tape

January 2010

<b>Reference:</b>	ADT10R (to suit 10mm sheet) ADT16R (to suit 16mm sheet) ADT25R (to suit 25mm sheet)
<b>Size:</b>	ADT10R – 28mm wide x 33 metres long ADT16R – 42mm wide x 33 metres long ADT25R – 50mm wide x 33 metres long

## **Description:**

A breathable self-adhesive tape supplied in rolls and used on multiwall polycarbonate. Available in different widths to suit the appropriate thickness of multiwall polycarbonate.

## **How it works:**

When cutting multiwall polycarbonate, dirt, dust and swarf will become lodged in the open flutes of the product. These flutes should have air blown through them to dislodge the dirt, dust and swarf to make the sheet clean and presentable. A blanking tape (Ref. BT10/16/25R) is then applied over the open flutes at the ridge (upper) end of the sheet.

The flutes at the eaves (lower) end of the sheet are taped over with the ADT10/16/25R anti-dust breather/filter tape.

As standard when supplying cut panels of multiwall polycarbonate, Twinfix will blow the flutes free of dirt, dust and swarf and apply BT blanking tape and ADT anti-dust tape so panels are actually supplied ready to fit.

## **Applications:**

- Covers and protects the flutes on the ridge end of multiwall polycarbonate
