

Timber Canopies

TWINFIX®

A timber canopy offers a natural and contemporary look and can really help to complement a building's outside environment by blending into the surroundings.

Our timber framed canopies are constructed using high quality structural grade soft wood timber with squared or circular supporting posts.

We use a combination of timber and aluminium in our canopies, with the connecting brackets and the glazing bars fabricated from aluminium.

The supporting posts fit into aluminium base plates, ensuring that the timber columns are always above ground. We do not set the timber posts into the ground as this can sometimes result in the wood rotting.

Both lean-to and free-standing versions are available and they can be fitted with either a mono or duo pitch roof.

Our canopies feature the following benefits:

-  Fast installation
-  Non-fragile roof glazing
-  Natural look
-  Long lasting and durable
-  Variety of glazing options
-  Aluminium connection and shoe detail

All of these roof structures are made from our Multi-Link-Panel Non-Fragile roof panel system that conforms to the HSE's recommended drop test for roofing assemblies ACR[M]001:2019, and passes with a 'B' designation. Class B is the best result that polycarbonate can achieve.

Should you prefer something different from our standard product we can design a canopy to meet your needs, if a full timber canopy is needed we can offer this.

The choice of roof glazing includes:

- ✓ Multiwall polycarbonate in clear or opal
- ✓ Clear solid polycarbonate
- ✓ Laminated glass
