

Twinfix celebrates its 30th anniversary as the UK's leading canopy and roof glazing company.

Twinfix's 30th anniversary

Established in 1990 by Graham Kench, and originally offering a range of high quality glazing bars for installing multiwall polycarbonate, this year Twinfix celebrate their 30th Anniversary – a proud milestone in this family business that is now run by the management team that include Graham's two daughters, Vicky Evans and Sarah Kench.

Twinfix has evolved over the years and now offers a wide range of products from canopies, walkways and rooflights in addition to its original high quality glazing bars. The Multi-Link-Panel rooflight system has a particularly good fit in railway station and depot refurbishment projects where its speed of installation is of

great benefit in helping to keep station close down times to a minimum.

In addition, the company design, manufacture and install its own purpose-built aluminium-framed glazed canopies and walkways and this year also sees the launch of a new product the Brise Soleil.

The colourful structures have proved to be extremely popular within the education arena, as well as in other more commercial areas.

"It's a great achievement to see Twinfix reach its 30th year anniversary. Our company is one that has grown throughout the years from the 3 people it started with to a team of 40 plus. We have evolved over the years and grown with the industry but we are really proud to keep our family ethos and the values Graham instilled on the company at the beginning, of a good quality product, hardworking team and a real passion and care for the product and service we provide are still inherent in the Twinfix model. As we enter into this 30th year the Twinfix team are excited about what the future will bring and the new projects and people we will work with."

For more information about Twinfix and their complete product range visit www.twinfix.co.uk

Launch of Brise Soleil

We are pleased to announce the launch of the Twinfix Brise Soleil.

This system optimises natural daylight within the building and limits solar heat gain and glare by using a series of angled horizontal or vertical blades to control the amount of light and solar waves entering a building. Brise Soleil can be installed to the exterior of any building, enhancing the aesthetics while providing shade and comfort to the people inside. They are a practical, attractive and long-term solution to solar gain for schools, retail outlets and other commercial buildings

The solar shading structure comprises of a light weight, rust resistant aluminium frame that can be powder coated to any standard RAL colour and aluminium ellipsoid blades (100mm to 300mm).

Tredegar Park Primary School

Twinfix bespoke canopies make great learning and play spaces for children of all ages. Individually designed for each location, they are available with a range of roof shapes. Canopies may be a lean-to design if the construction of the building walls is acceptable, or free-standing where this is not the case.

Working with main contractor Willis Construction, we recently designed, manufactured and installed a free-standing mono pitch canopy and a bespoke entrance canopy at Tredegar Park Primary School in Newport. With 30 years' experience the

Twinfix Technical Team had no problems designing two canopies to suit both their needs and budget.

The two canopies installed at Tredegar Park Primary School are manufactured from powder coated aluminium that will not rust, and glazed with tough, UV resistant, opal multiwall roofing that conforms to the ACR[M]001:2014 drop test as outlined by the HSE in HSG33, so not only will they look good for many years to come, but they are designed and built with safety in mind – just what is required for school use.

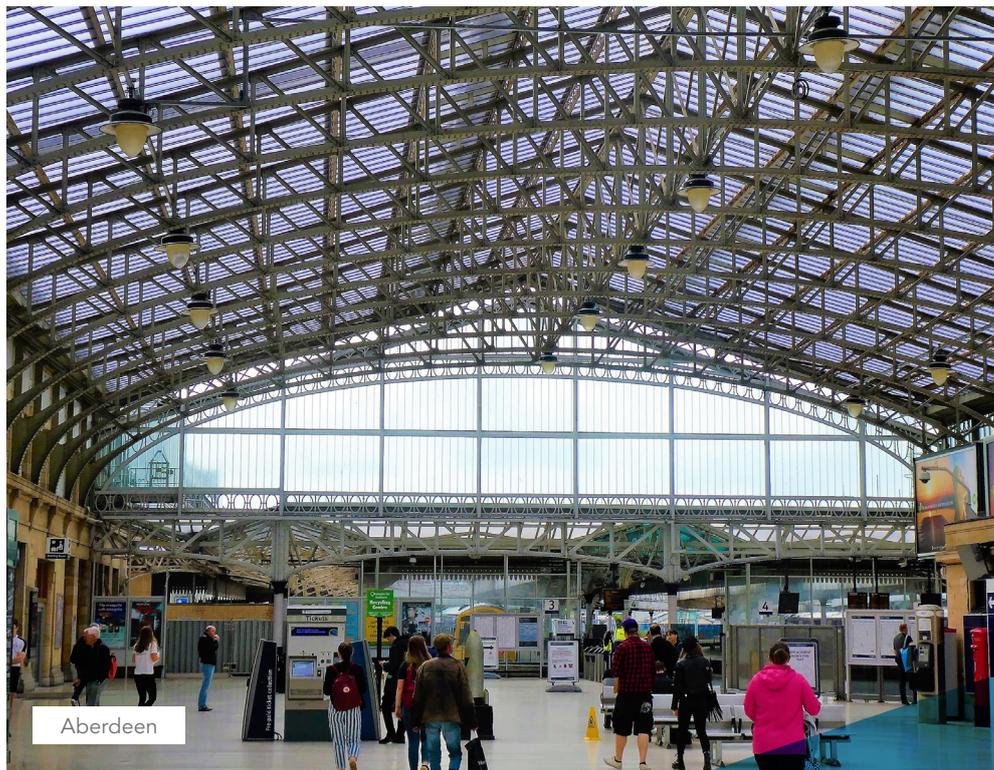

Rail renovations

Last year our team were delighted to be involved in some fantastic station renovation projects which saw our Multi-Link-Panel NF system help bring some historic buildings back to their former glory. Our Multi-Link-Panel is a non-fragile system which conforms to ACR[M]001:2014

At Aberdeen station, we worked with Principal Contractor Story Contracting and Macleod Roofing replacing 10,000 of the original glass panels with Multi-Link-Panels glazed with our innovative Georgian wired polycarbonate.

As well as Aberdeen this system was also installed at Rhyl, Llandudno Junction, Kilmarnock, Bognor Regis, Shrewsbury and Manchester Piccadilly in 2019.

Mount Snowdon

In September, 8 members of our team climbed to the summit of Mount Snowdon to raise money for St Rocco's Hospice. We are delighted to announce that they raised £870 in sponsorship for this well-deserved charity. Well done everyone!

Rail business awards

Twinfix are delighted to have been short-listed in the Supplier & Contractor Excellence category of the 2020 Rail Business Awards.

We have been nominated based on our work in the rail industry over the last 30 years, supplying and often installing our Multi-Link-Panel NF as a safe, virtually unbreakable alternative when replacing the original glass roof-glazing at stations throughout the UK.

Best Roof Glazing and Canopy Installation Company

Twinfix were recently awarded Best Roof Glazing and Canopy Installation Company in the 2019 Build Architecture Awards.

Twinfix Limited

Best Roof Glazing & Canopy Installation Company 2019
