

Case Study

Colne Primet Academy

May 2023

Twinfix recently installed a free-standing duo-pitch canopy at Colne Primet Academy in Colne, providing a new outdoor dining area for students and staff. The canopy, which spanned 9m in run length and 6.1m in projection, featured the Alu-Link-Panel solid aluminium roof, which offers exceptional durability and weather protection.

The new outdoor dining area has been well-received by the school community, providing a comfortable and attractive space for students and staff to enjoy their meals. The canopy has also helped to reduce congestion in the indoor dining area.

The Alu-Link-Panel roof provides a range of benefits, including excellent protection from rain and UV rays, ensuring that the outdoor dining area is usable in all weather conditions. The solid aluminium panels are also incredibly durable, making them resistant to damage and rust. This ensures that the canopy will require minimal maintenance over its lifetime, providing long-term cost savings for the school.

In addition to its practical benefits, the new outdoor dining area has also provided a space for socialising and relaxation, enhancing the overall student experience at Colne Primet Academy. The attractive design of the canopy has added to the aesthetic appeal of the school, improving its overall appearance and creating a welcoming environment for visitors.

Overall, the Twinfix free-standing duo-pitch canopy with the Alu-Link-Panel roof has been a valuable addition to Colne Primet Academy, providing a durable, attractive, and practical outdoor dining area for students and staff alike.
